Nittaya Phanupak
MD, PhD
Institute of HIV Research and
Innovation for Innovation in
Bangkok, Thailand

Reena Rajasuriar
MPharm, PhD
University of Malaya, Malaysia

ABOUT APACC

Over the years, enormous progress has been made in the fight against HIV and co-infections with HIV. Both academia and industry have contributed greatly to equipping the medical community with the best medications and expertise possible to optimally treat people living with HIV.

However, international platforms for scientific interchange are not always accessible to medical professionals worldwide due to budget and travel restrictions. Also, most major conferences do not usually address local and regional issues. In particular, the Asian medical community in this field of research currently has very few platforms that serve the needs of HIV healthcare professionals in this region.

What Your Peers Say:

In 2022, APACC attracted 259 attendees from 27 different countries, ensuring rich, lively conversation and knowledge sharing.

“ The most important medical conference in the Asia-Pacific region. ”

“ An excellent platform for early career investigators, community advocates and community providers, program implementers, and policymakers to learn regionally-tailored scientific and implementation knowledge and establish friendly networking. ”

“ Great opportunity to learn about pan-Asian issues related to HIV. ”

Registration for APACC 2023 is Now Open!

Join your peers at this hybrid meeting – either live in Singapore or online – from 8 to 10 June 2023.
